

# Project Information

Approximately 2.5 miles of Interstate 10 will be widened from Orange Street to Ford Street in Redlands to ease traffic congestion.

One general-use lane will be added in both directions next to the freeway median.

Eleven bridges will be widened, and a concrete median barrier will be built.

Sound walls measuring 14 feet will be built along both sides of the freeway.

Construction is scheduled to last 30 months and will cost \$46.5 million.

SANBAG will administer a full Public Information and Safety Program to provide regular project updates to residents, business operators and other interested community members.
